REPORT :

Digital Literacy Project

NAME: RIYAKRISHNA

REG NO : 25BHI10012

BRANCH : HEALTH INFORMATICS

YEAR : 1ST YEAR

COURSE: DIGITAL LITERACY

CODE: CSE0001

DATE: 27-03-2026

INTRODUCTION

The Digital Literacy Project focuses on developing essential skills required to effectively use digital tools and platforms in today's world. As a student, it is important to understand how to communicate professionally, maintain an online presence, and use technology responsibly.

In this project, I completed five tasks related to digital awareness, professional portfolio building, coding practice, communication etiquette, and cybercrime awareness. Each task helped me gain practical knowledge and improve my understanding of how digital platforms are used in academic and professional environments.

This project not only enhanced my technical skills but also increased my awareness about online safety and responsible digital behaviour. Overall, it helped me build a strong foundation for using digital tools effectively in my future studies and career.

Task 1 :

Digital Literacy Awareness Infographic

For this task, I used Canva to create a digital literacy awareness infographic. I chose Canva because it is simple to use and provides many ready-made templates and design elements, which made it easier for me to create a neat and visually appealing design.

My infographic explains what digital literacy means and why it is important for students today. It includes topics like safe internet practices, responsible use of social media, and maintaining a professional online presence. I also added a few examples of useful digital tools that students can use for studying and communication. I tried to keep the design simple, with short points and clear visuals so that anyone can easily understand the information.

One difficulty I faced was deciding what content to include, since everything had to fit into a single page. It was challenging to keep the design clean while also covering important points. However, this helped me learn how to present information in a clear and effective way.

Task 2 :

Build Your Student Digital Portfolio

For this task, I created profiles on LinkedIn, GitHub, and Kaggle. I chose these platforms because they are widely used by students and professionals for learning, showcasing skills, and building a strong digital presence.

LinkedIn is mainly used for creating a professional profile and connecting with people in different fields. It helps in building a network and exploring internship and job opportunities. GitHub is used to store and manage coding projects, and it allows me to showcase my work and track my progress over time. Kaggle is a platform focused on data science and machine learning, where I can learn, practice, and explore real-world datasets.

Over the next four years, I plan to regularly update my GitHub with projects and improve my coding skills. I will use LinkedIn to build connections, stay updated with industry trends, and apply for internships. On Kaggle, I aim to improve my knowledge in data analysis and participate in competitions to gain practical experience.

TASK 3:

Explore Coding & Collaboration Platforms

For this task, I used Hacker Rank as my coding practice platform and Google Forms for collaboration. On Hacker Rank, I created an account and completed a beginner-level problem. This helped me understand basic problem-solving and how coding questions are structured. It also gave me some hands-on experience in writing simple programs and checking their correctness.

For the collaboration part, I created a Google Form based on digital literacy awareness. The form included different types of questions such as multiple-choice and short answer questions. I also viewed the responses in Google Sheets, which helped me understand how data can be collected and analyzed easily.

These tools will be very useful for me academically. Hacker Rank will help me improve my coding skills through regular practice, which is important for exams and placements. Google Forms will help me in creating surveys, collecting data for projects, and organizing information efficiently. Overall, these platforms will support my learning and help me build practical skills.

Task 4:

Draft a Professional Email & Etiquette Guide

Poor Digital Communication – Situation & Improvement

A college student received a message on WhatsApp claiming to be from their bank, stating that their account would be blocked unless they verified their details immediately. The message included a link and created urgency. Without verifying the source, the student clicked the link and entered their UPI credentials. Within minutes, money was deducted from their account. This situation occurred due to poor digital communication awareness and failure to verify the authenticity of the message.

This could have been prevented by checking the sender's details carefully and avoiding clicking on suspicious links. The student should have contacted the bank through official channels before taking any action. Additionally, understanding that banks never ask for sensitive details like PINs or passwords via messages could have helped avoid the fraud. Proper digital literacy and cautious communication are essential to prevent such incidents.

Task 5 :

Cybercrime Awareness Case Study & Prevention Guide

While researching cybercrime, what surprised me the most was how easily people can become victims without even realizing it. Many attacks, such as phishing and online payment fraud, often look very genuine and can trick even careful users. I was also surprised to learn how quickly personal and financial information can be misused once it is exposed.

As a result of this research, one habit I will personally change is being more cautious while clicking on links and sharing sensitive information online. I will always verify the authenticity of websites, emails, and messages before taking any action. I will also avoid sharing OTPs or personal details with anyone, even if the request seems trustworthy.

This task made me more aware of online risks and the importance of staying alert while using digital platforms.

CONCLUSION:

In conclusion, this project helped me understand the importance of digital literacy in both academic and professional life. Through the different tasks, I learned how to create a digital presence, practice coding, communicate professionally, and stay aware of online risks.

It also improved my confidence in using various digital tools and platforms. I now feel more prepared to use these skills in my future studies and career. Overall, this project was a valuable learning experience that helped me develop practical knowledge and responsible digital habits.
